Information in Public Documents

Egypt’s score on the Open Budget Index shows that the government provides the public with some information on the central government’s budget and financial activities during the course of the budget year. This makes it difficult for citizens to hold government accountable for its management of the public’s money.

The Open Budget Index 2008 evaluates the quantity and type of information that governments make available to their publics in the seven key budget documents that should be issued during the budget year. One of the most important documents is the executive’s budget proposal. It should contain the executive’s plans for the upcoming year along with the cost of the proposed activities. The proposal should be available to the public and to the legislature prior to being finalized, at least three months before the start of the budget year to allow for sufficient review and public debate.

In Egypt, the proposal provides some information to the public, meaning citizens have a general, albeit incomplete, picture of the government’s plans for taxing and spending for the upcoming year.

Moreover, it is somewhat difficult to track spending, revenue collection and borrowing during the year. Egypt publishes fairly detailed in-year reports but does not publish a mid-year review. Publishing this document could strengthen public accountability by providing a more comprehensive update on how the budget is being implemented during the year.

It is also difficult to assess budget performance in Egypt once the budget year is over. A year-end report is not produced, preventing comparisons between what was budgeted and what was actually spent and collected. Also, Egypt does not make its audit report public and does not provide any information on whether the audit report’s recommendations are successfully implemented.

Access to the highly detailed budget information needed to understand the government’s progress in undertaking a specific project or activity remains limited. Egypt has not codified the right to access government information into law.

Public Participation and Institutions of Accountability

Beyond improving access to key budget documents, there are other ways in which Egypt’s budget process could be made more open.

Opportunities for citizen participation in budget debates could be increased. For example, the legislature does not hold hearings on the budget in which the public can participate.

The independence of Egypt’s Supreme Audit Institution is somewhat limited. The head of the SAI may be removed by the executive. In addition, the SAI does not maintain formal mechanisms of communication with the public to receive complaints and suggestions to assist it in determining its audit program.
The Open Budget Index evaluates the quantity and type of information available to the public in a country's budget documents. A country's placement within a performance category was determined by averaging the response to 91 questions on the Open Budget Questionnaire related to information contained in the eight key budget documents that all countries should make available to the public.

Research to complete the Open Budget Questionnaire was undertaken by:
