Drawing on internationally accepted criteria developed by multilateral organizations, the Open Budget Survey uses 109 equally weighted indicators to measure budget transparency. These indicators assess whether the central government makes eight key budget documents available to the public online in a timely manner and whether these documents present budget information in a comprehensive and useful way.

Each country receives a composite score (out of 100) that determines its ranking on the Open Budget Index – the world’s only independent and comparative measure of budget transparency.

What is Japan’s OBI score in 2017?

Japan’s score of 60 out of 100 is substantially higher than the global average score of 42.

How comprehensive and useful is the information provided in the key budget documents that Japan publishes?

Japan provides few opportunities for the public to engage in the budget process. The legislature and supreme audit institution in Japan provide limited oversight of the budget.
Transparency alone is insufficient for improving governance. Public participation in budgeting is vital to realize the positive outcomes associated with greater budget transparency.

To measure public participation, the Open Budget Survey assesses the degree to which the government provides opportunities for the public to engage in budget processes. Such opportunities should be provided throughout the budget cycle by the executive, the legislature, and the supreme audit institution.

The questions assessing participation in the Open Budget Survey 2017 were revised to align them with the Global Initiative for Fiscal Transparency’s new principles on public participation, which now serve as the basis for widely accepted norms on public participation in national budget processes. Therefore, data on the extent of public participation in budgeting in the Open Budget Survey 2017 cannot be compared directly to data from earlier editions.

Japan’s score of 20 out of 100 indicates that it provides few opportunities for the public to engage in the budget process. This is higher than the global average score of 12.

To what extent do different institutions in Japan provide opportunities for public participation?

Key Budget Documents

Pre-Budget Statement: discloses the broad parameters of fiscal policies in advance of the Executive’s Budget Proposal, outlines the government’s economic forecast, anticipated revenue, expenditures, and debt.

Executive’s Budget Proposal: submitted by the executive to the legislature for approval, details the sources of revenue, the allocations to ministries, proposed policy changes, and other information important for understanding the country’s fiscal situation.

Enacted Budget: the budget that has been approved by the legislature.

Citizens Budget: a simpler and less technical version of the government’s Executive’s Budget Proposal or Enacted Budget, designed to convey key information to the public.

In-Year Reports: include information on actual revenues collected, actual expenditures made, and debt incurred at different intervals, issued quarterly or monthly.

Mid-Year Review: contains a comprehensive update on the implementation of the budget as of the middle of the fiscal year; includes a review of economic assumptions and an updated forecast of budget outcomes.

Year-End Report: describes the situation of the government’s accounts at the end of the fiscal year and, ideally, an evaluation of the progress made toward achieving the budget’s policy goals.

Audit Report: issued by the supreme audit institution, this document examines the soundness and completeness of the government’s year-end accounts.

PUBLIC PARTICIPATION

How does public participation in Japan compare to others?

Japan’s score of 20 out of 100 indicates that it provides few opportunities for the public to engage in the budget process. This is higher than the global average score of 12.
The Open Budget Survey examines the role that legislatures, supreme audit institutions, and independent fiscal institutions play in the budget process and the extent to which they are able to provide effective oversight of the budget. These institutions play a critical role — often enshrined in national constitutions or laws — in planning budgets and overseeing their implementation.

These indicators were revised to better assess the role of formal oversight institutions in ensuring integrity and accountability in the use of public resources. Therefore, data on the role and effectiveness of oversight institutions in the Open Budget Survey 2017 should not be compared directly to data from earlier editions.

To what extent does the legislature in Japan provide budget oversight?

The legislature provides limited oversight during the budget cycle. This score reflects that the legislature provides limited oversight during the planning stage of the budget cycle and limited oversight during the implementation stage of the budget cycle. The main barriers to effective legislative oversight are:

- A debate on budget policy by the legislature does not take place before the tabling of the Executive’s Budget Proposal.
- A legislative committee does not publish a report on their analyses of the Executive’s Budget Proposal online.
- A legislative committee does not publish a report on in-year budget implementation online.

To what extent does the supreme audit institution in Japan provide budget oversight?

The supreme audit institution provides adequate budget oversight.

- Under the law, it has significant discretion to undertake audits as it sees fit.
- Moreover, the head of the institution is appointed by the legislature or judiciary and cannot be removed without legislative or judicial approval, which bolsters its independence.
- Finally, the supreme audit institution is provided with sufficient resources to fulfill its mandate, but its audit processes are not reviewed by an independent agency.

For more detailed information on the survey findings for Japan, please see the Open Budget Survey Data Explorer at survey.internationalbudget.org.

How can Japan improve transparency?

Japan should prioritize the following actions to improve budget transparency:

- Produce and publish a Mid-Year Review.
- Increase the information provided in the Pre-Budget Statement by including information on the macroeconomic forecast and estimates of total revenues and revenue policies and priorities.
How can Japan improve participation?
Japan should prioritize the following actions to improve public participation in its budget process:

■ Pilot mechanisms for members of the public and executive branch officials to exchange views on national budget matters during the formulation of the national budget. These mechanisms could build on innovations, such as participatory budgeting and social audits. For examples of such mechanisms, see www.fiscaltransparency.net/mechanisms/

■ Hold legislative hearings on the formulation of the annual budget, during which members of the public or civil society organizations can testify.

■ Establish formal mechanisms for the public to assist the supreme audit institution in formulating its audit program and to participate in relevant audit investigations.

How can Japan improve oversight?
Japan should prioritize the following actions to make budget oversight more effective:

■ Ensure legislative committees publish reports on their analysis of the Executive’s Budget Proposal online.

■ Ensure a legislative committee publishes a report on in-year budget implementation online.

■ Ensure audit processes are reviewed by an independent agency.

■ Consider setting up an independent fiscal institution to further strengthen budget oversight.

METHODOLOGY

The Open Budget Survey uses internationally accepted criteria developed by multilateral organizations from sources such as the International Monetary Fund (IMF), the Organisation for Economic Co-operation and Development (OECD), the International Organisation of Supreme Audit Institutions (INTOSAI) and the Global Initiative for Fiscal Transparency (GIFT).

It is a fact-based research instrument that assesses what occurs in practice through readily observable phenomena. The entire research process took approximately 18 months between August 2016 and January 2018 and involved about 300 experts in 115 countries. The Open Budget Survey 2017 assesses only events, activities, or developments that occurred up to 31 December 2016. The survey was revised somewhat from the 2015 version to reflect evolving methods for disseminating budget information and to strengthen individual questions on public participation and budget oversight. A discussion of these changes can be found in the Open Budget Survey Global Report (see link below).

Survey responses are typically supported by citations and comments. This may include a reference to a public document, an official statement by the government, or comments from a face-to-face interview with a government official or other knowledgeable parties.
