Drawing on internationally accepted criteria developed by multilateral organizations, the Open Budget Survey uses 109 equally weighted indicators to measure budget transparency. These indicators assess whether the central government makes eight key budget documents available to the public online in a timely manner and whether these documents present budget information in a comprehensive and useful way.

Each country receives a composite score (out of 100) that determines its ranking on the Open Budget Index – the world’s only independent and comparative measure of budget transparency.

South Africa’s score of 89 out of 100 is substantially higher than the global average score of 42.
Transparency alone is insufficient for improving governance. Public participation in budgeting is vital to realize the positive outcomes associated with greater budget transparency.

To measure public participation, the Open Budget Survey assesses the degree to which the government provides opportunities for the public to engage in budget processes. Such opportunities should be provided throughout the budget cycle by the executive, the legislature, and the supreme audit institution.

The questions assessing participation in the Open Budget Survey 2017 were revised to align them with the Global Initiative for Fiscal Transparency’s new principles on public participation, which now serve as the basis for widely accepted norms on public participation in national budget processes. Therefore, data on the extent of public participation in budgeting in the Open Budget Survey 2017 cannot be compared directly to data from earlier editions.

South Africa’s score of 24 out of 100 indicates that it provides few opportunities for the public to engage in the budget process. This is higher than the global average score of 12.

To what extent do different institutions in South Africa provide opportunities for public participation?
For more detailed information on the survey findings for South Africa, please see the Open Budget Survey Data Explorer at survey.internationalbudget.org.

**How can South Africa improve transparency?**

This OBS was completed against the background of significant political instability in South Africa. South Africa has set a standard of budget transparency since the initiation of the OBS in 2006. These transparency reforms were built on the stable foundation of institutions such as the National Treasury, the South African Revenue Service, and the South African Reserve Bank. Political instability is now posing a significant risk to these institutions and thus also to South Africa’s proud transparency record. In addition to the specific recommendations below, a more general recommendation is that the necessary steps be taken to safeguard these institutions and thus safeguard South Africa’s hard-won transparency gains over the medium to long term.

South Africa should prioritize the following actions to improve budget transparency:

- Increase the information provided in the Executive’s Budget Proposal by including more data on the financial position of the government.
- Increase the information provided in the Year-End Report by including more information on the comparisons between planned revenues and actual outcomes and comparisons between the original macroeconomic forecast and the actual outcome.
- The main barriers to effective legislative oversight are:
  - The Executive’s Budget Proposal is not provided to legislators at least two months before the start of the budget year.
  - The Executive’s Budget Proposal is not approved by legislators before the start of the budget year.
  - A legislative committee does not publish reports on their examination of the Audit Report on the legislature’s website.

To what extent does the supreme audit institution in South Africa provide budget oversight?

The supreme audit institution provides adequate budget oversight.

- Under the law, it has full discretion to undertake audits as it sees fit.
- Moreover, the head of the institution is appointed by the legislature or judiciary and cannot be removed without legislative or judicial approval, which bolsters its independence.
- Finally, the supreme audit institution is provided with sufficient resources to fulfill its mandate, and its audit processes are reviewed by an independent agency.

Oversight by an Independent Fiscal Institution

South Africa’s independent fiscal institution (IFI) is called the Parliamentary Budget Office. Its independence is set in law, and it reports to the legislature. It publishes its own macroeconomic and fiscal forecasts and its own cost estimates of all new policy proposals.

While IFIs are not yet widespread globally, they are increasingly recognized as an important source of independent, nonpartisan information. IFIs take a variety of different institutional forms. Common examples include parliamentary budget offices and fiscal councils. For more information, see Lisa von Trapp, Ian Lienert, and Joachim Wehner, “Principles for Independent Fiscal Institutions and Case Studies,” OECD Journal on Budgeting, March 2016 (special issue), pp. 9-24.
How can South Africa improve participation?
South Africa should prioritize the following actions to improve public participation in its budget process:

- Pilot mechanisms for members of the public and executive branch officials to exchange views on national budget matters during the monitoring of the national budget’s implementation. These mechanisms could build on innovations, such as participatory budgeting and social audits. See [www.fiscaltransparency.net/mechanisms/](http://www.fiscaltransparency.net/mechanisms/) for examples of such mechanisms.
- Hold legislative hearings on the formulation of the annual budget, during which any members of the public or civil society organizations can testify.
- Establish formal mechanisms for the public to assist the supreme audit institution in formulating its audit program and to participate in relevant audit investigations.

How can South Africa improve oversight?
South Africa should prioritize the following actions to make budget oversight more effective:

- Ensure the Executive’s Budget Proposal is provided to legislators at least two months before the start of the budget year.
- Ensure a legislative committee publishes a report on the Audit Report on their website.

METHODOLOGY

The Open Budget Survey uses internationally accepted criteria developed by multilateral organizations from sources such as the International Monetary Fund (IMF), the Organisation for Economic Co-operation and Development (OECD), the International Organisation of Supreme Audit Institutions (INTOSAI) and the Global Initiative for Fiscal Transparency (GIFT).

It is a fact-based research instrument that assesses what occurs in practice through readily observable phenomena. The entire research process took approximately 18 months between August 2016 and January 2018 and involved about 300 experts in 115 countries. The Open Budget Survey 2017 assesses only events, activities, or developments that occurred up to 31 December 2016. The survey was revised somewhat from the 2015 version to reflect evolving methods for disseminating budget information and to strengthen individual questions on public participation and budget oversight. A discussion of these changes can be found in the Open Budget Survey Global Report (see link below).

Survey responses are typically supported by citations and comments. This may include a reference to a public document, an official statement by the government, or comments from a face-to-face interview with a government official or other knowledgeable parties.
